Abstract

Cyber crime, or the use of networked computer computers for illegal gain, poses an increasingly significant challenge to developing countries. Many emerging nations simply do not have the resources or legal systems in place to effectively combat such criminal activities. This paper critically examines key issues in combating cyber crime in developing countries; by using Indonesia as a case study. To achieve this aim, this paper will review best practices or principles in dealing with cyber crime that are divided into two categories: restorative and preventative strategies and identify gaps between best practices with current situation in Indonesia thus, conclude some applicable principles that can contribute to combat cyber crime.
